

SATELLITE FOREST MONITORING CERTIFICATE

Certificate No. CS-20260928-3466221

CanopySat hereby certifies that the forest zone located at coordinates **-3.4653°, -62.2159°** (radius: 10 km) has been analyzed using real satellite data from 6 independent satellite sources on **2026-09-28**. This certificate confirms the satellite-based forest monitoring data quality and compliance with REDD+ MRV (Measurement, Reporting and Verification) requirements.

80

Forest Integrity Score
 STABLE

FOREST MONITORING DATA

Indicator	Value	Source
Forest cover	99.9%	ESA Sentinel-2 (10m)
Vegetation health (NDVI)	0.845	ESA Sentinel-2 (10m)
Canopy height (GEDI+S2 10m)	13.2 m	NASA GEDI LiDAR + Sentinel-2
Above-ground biomass	78.4 t/ha	NASA GEDI LiDAR (Chave 2014)
Analysis date	2026-09-28	CanopySat
Satellites used	ESA Sentinel-2, NASA FIRMS, Landsat 8, Sentinel-1, Sentinel-2, Landsat 9	ESA / NASA

CARBON ASSESSMENT (IPCC METHODOLOGY)

Indicator	Value	Methodology
Zone area	7,854 ha	GPS coordinates
CO2 per hectare	170.3 t CO2/ha	IPCC Tier 1 (AGB+BGB × 0.47 × 3.67)
Total CO2 sequestered	1,337,536 t CO2	IPCC 2006/2019
Carbon credit value	EUR 20,063,040	EUR 15/tonne CO2 (voluntary market)
Annual potential	EUR 1,671,920 / year	Based on maintained preservation
REDD+ MRV compliance	Compliant	VCS VM0007 / VM0009 compatible

DISCLAIMER: This certificate is issued by CanopySat based on satellite data analysis. It provides satellite-based MRV data consistent with REDD+ monitoring requirements. For official carbon credit issuance under VCS, Gold Standard or other recognized standards, independent third-party verification by an accredited auditor is required. Carbon values are estimates based on IPCC Tier 1 methodology.
