## FOREST INTEGRITY SCORE / 100 Healthy Forest

### DETAILED RESULTS

| Indicator                         | Value                                                                                | Interpretation                                                     |
|-----------------------------------|--------------------------------------------------------------------------------------|--------------------------------------------------------------------|
| Current vegetation (NDVI)         | 0.845                                                                                | Excellent                                                          |
| NDVI Trend 3 years (Sentinel-2)   | +0.029                                                                               | Stable                                                             |
| 10-year trend (Landsat 8/9)       | +0.458                                                                               | Improving                                                          |
| 40-year trend (Landsat 1984)      | +0.495                                                                               | Improving                                                          |
| Forest Status (FAO)               | Forest recovery                                                                      | Recuperation                                                       |
| Annual NDVI rate                  | +1.24% / year                                                                        | Amelioration                                                       |
| NDVI change 5 years               | +0.012                                                                               | Stable                                                             |
| Leaf type                         | Mixed (Coniferous/Broadleaf)                                                         | Mixed needles and flat leaves                                      |
| Developmental stage               | Old-growth forest (>120 years)                                                       | Ancient forest, high biodiversity                                  |
| Above-ground biomass              | ~78.4 t/ha                                                                           | Medium biomass (50-150 t/ha)                                       |
| Canopy Height (NASA GEDI LiDAR)   | 13.2m max / 7.3m median                                                              | Tree height measured by laser from the International Space Station |
| GEDi Tree Cover                   | 100%                                                                                 | Percentage of the zone covered by trees according to NASA GEDI     |
| AI Forest Type                    | Dense Tropical Forest                                                                | High biodiversity, dense canopy                                    |
| Sentinel-1 Radar (VV)             | -7.805 dB                                                                            | Dense forest (radar)                                               |
| Forest cover                      | 99.9%                                                                                | Excellent                                                          |
| Fire pixels detected (FIRMS/year) | 146 pixels                                                                           | ~36 events estimated                                               |
| Overall trend                     | stable                                                                               |                                                                    |
| Satellites used                   | - ESA Sentinel-2 - NASA FIRMS - ESA Sentinel-1 - NASA Landsat 8/9 - NASA Landsat 4/5 |                                                                    |
| Deforestation Alert               | STABLE — No significant change                                                       |                                                                    |

|                         |            |          |
|-------------------------|------------|----------|
| Area change (3 years)   | +1 ha      | +0.01%   |
| Annual rate (area/yr)   | +0.3 ha/yr | Recovery |
| Area change (10 years)  | +9059.5 ha | +988.59% |
| Annual rate 10yr (area) | +906 ha/yr | Recovery |

SCORE BREAKDOWN

| Component                          | Points | Maximum |
|------------------------------------|--------|---------|
| Current vegetation (NDVI)          | 25     | 25      |
| NDVI trend (3 years)               | 15     | 25      |
| Forest cover                       | 25     | 25      |
| Sentinel-1 Radar (VV)              | 15     | 15      |
| Fire score (0=many fires, 10=none) | 0      | 10      |
| TOTAL                              | 80     | 100     |

FIRE DETECTION METHODOLOGY: Fire pixels are detected by NASA FIRMS using VIIRS (375m) and MODIS (1km) thermal anomaly sensors. Raw pixel count represents thermal detections over 12 months in the analysis zone. Estimated fire events are calculated using NASA clustering methodology (~4 pixels per fire event average). This is a statistical approximation. For precise fire event mapping, consult NASA FIRMS directly at [firms.modaps.eosdis.nasa.gov](https://firms.modaps.eosdis.nasa.gov)
